

NEWS RELEASE

A-EON Technology acquires TuneNet

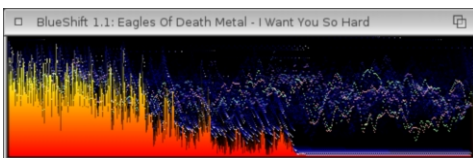

Multi-Format Media Player for Classic & Next-Generation AmigaOS

Cardiff, 26th May 2015

A-EON Technology is pleased to announce that it has purchased the rights to *TuneNet*, the multi-format Music Player and Internet Radio Streamer for AmigaOS 4, from its developer Paul Heams.

As part of the agreement A-EON has acquired the exclusive rights to the full *TuneNet* source code, binaries and plugins along with the worldwide exclusive rights to develop publish and distribute the software and its plugins. A-EON has also acquired the *TuneNet* web domain and exclusive rights to all trade names for product marketing, promotion and branding for the AmigaOS and Amiga-related operating systems including emulation. Meanwhile Paul Heams will retain the non-exclusive rights to the "audio re-sampling class" source code for other projects.

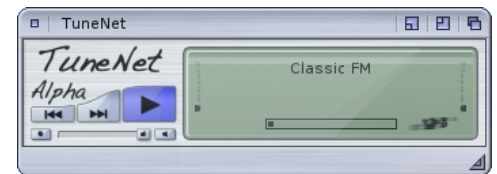

TuneNet is a modular multi-format player which was developed from the ground up by Paul Heams in 2004. It supports a range of music formats through special plugins and includes recording and Shout/Ice-cast broadcasting. It's also includes a system GUI

along with a customisable miniature dock facility and XML driven skinnable interface. Over the years *TuneNet* received many notable upgrades. It was made freely available on *OS4Depot* and was also bundled as a third-party contribution with AmigaOS4.1.

TuneNet's features include:-

- *The ability to plays MP3's & MP3 Shoutcast streams*
- *Integration with AmigaOS browsers*
- *A configurable and savable Playlist*
- *Built in Internet Stream Searching facility*
- *Drag and Drop with recursive loading*
- *Sound Level display*
- *Radio station and current tune display*
- *Reaction GUI and OS4 native*
- *Support for 3rd-party Players (Plugins)*
- *HD Save for Streams*
- *DV3.2 tag support*
- *Docky Skinnable Interface*
- *Search/Sorting and Editing facilities*
- *Different Playing Facilities (XFade, Gapless Play etc.)*
- *Sub Song Support*
- *On the fly resampling/multi-mixing*
- *Encoder support and Shoutcast compatible Broadcasting*
- *Extended M3U playlist support + Station saving within playlists*

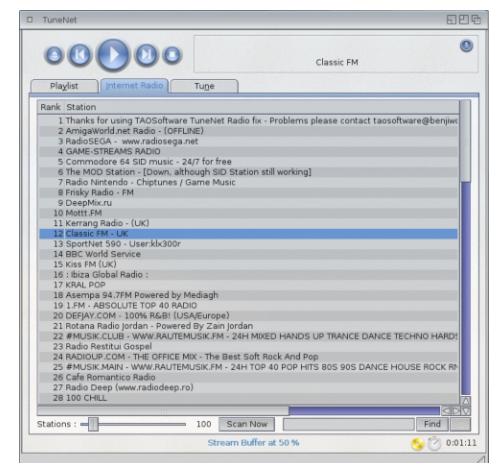

In recent years, due to changing work commitments, Paul hasn't been able to devote time to support and update *TuneNet*. Rather than let his creation stagnate Paul said, "I've realised for quite a while that *TuneNet* needed a new home. I just did not have the time to give it the attention it deserved and I'm really pleased that A-EON have taken up the challenge to drive it forward". Matthew Leaman added, "*TuneNet* is quality AmigaOS software and we look forward to building on Paul's excellent legacy".
